WHAT I BUILD

Web platforms, backend services and automation products that turn complex operational workflows into reliable software. 7+ years across TypeScript, Node.js, React, data systems and cloud infrastructure.

EXPERIENCE

01 2023 — Present

Senior Software Engineer

Northstar Technologies

- Designed event-driven services supporting 2M+ monthly API requests.
- Reduced processing latency 42% with asynchronous workers and Redis.
- Built CI/CD and integration testing across 14 production services.

02 2020 — 2022

Software Engineer

Atlas Digital

- Built React applications and REST APIs for 8,000+ business users.
- Improved critical API latency 35% through database optimization.

03 2018 — 2020

Junior Software Developer

Orbit Systems

- Developed business applications with JavaScript, PHP and SQL.
- Automated recurring workflows and saved 15 hours of manual work weekly.

STACK

PROJECTS

Workflow Intelligence

Multi-tenant analytics, event processing and automated alerts.

Document Automation

Template-driven generation for recurring business documents.

Observability Toolkit

Health, logs and deployment diagnostics for distributed services.
